DNN Programming Assignment Report Template

Rajesh Garg | Student ID: 2026AJ05869
Chosen values: h=64; d=128; heads=4; seeds=7, 17, 27

Clarification applied

The variants table and related FAQ are ignored. Parameter counts must be recomputed for the chosen h and d.

Problem 1 setup, preprocessing and cell verification

[Replace with concise evidence; number/caption every figure and table.]

HAR recurrent comparison

[Replace with concise evidence; number/caption every figure and table.]

Adding task, gradients, hidden-size sweep and forget-bias ablation

[Replace with concise evidence; number/caption every figure and table.]

Problem 2 attention, MHA and encoder verification

[Replace with concise evidence; number/caption every figure and table.]

Own 3-token Q/K/V hand calculation and code agreement

[Replace with concise evidence; number/caption every figure and table.]

HAR Transformer and positional ablation

[Replace with concise evidence; number/caption every figure and table.]

Language model, BPC, samples and complexity ablations

[Replace with concise evidence; number/caption every figure and table.]

AI-use statement and references

[Replace with concise evidence; number/caption every figure and table.]
