DNN Programming Assignment Report Template

Name: Rajesh Garg | Student ID: REPLACE

Problem 1: setup and preprocessing

Replace with concise evidence. Number and caption every table and figure, and refer to each in the text.

Cell verification and parameter counts

Replace with concise evidence. Number and caption every table and figure, and refer to each in the text.

HAR results

Replace with concise evidence. Number and caption every table and figure, and refer to each in the text.

Adding-task results

Replace with concise evidence. Number and caption every table and figure, and refer to each in the text.

Gradients, sweep, ablation and analysis

Replace with concise evidence. Number and caption every table and figure, and refer to each in the text.

Problem 2: attention and encoder tests

Replace with concise evidence. Number and caption every table and figure, and refer to each in the text.

HAR Transformer and positional ablation

Replace with concise evidence. Number and caption every table and figure, and refer to each in the text.

Language model, BPC, samples and ablations

Replace with concise evidence. Number and caption every table and figure, and refer to each in the text.

AI-use statement and references

Replace with concise evidence. Number and caption every table and figure, and refer to each in the text.
